

Renewal-risk report — Meridian Health

MERID-001 · contracts: CTR-2023-MH-001, CTR-2024-MH-002 · generated 2026-04-27T19:50:03

RENEWAL RISK: RED

Meridian faces unresolved contract-billing misalignment, repeated support escalations on marketing seats over two years, eight SLA breaches, and a procurement-level dispute threat that has escalated to legal review.

Executive narrative

Meridian Health presents acute renewal risk driven by three converging failures: (1) contract-billing mismatch—invoicing continued post-expiry with no renewal contract executed, triggering legal review by James Park's procurement team; (2) chronic support escalation on marketing seat utilization raised four times across TKT-4871, TKT-4903, TKT-4909, and TKT-4920 over 2+ years with no resolution, creating documented AM non-response pattern; (3) operational trust erosion from eight SLA breaches across 22 tickets and a December 15 outage (4.5 hours) where the promised €929.18 credit was not applied to INV-2026-MH-026, requiring James Park to escalate in writing on January 19. The account shows strong engineering adoption (27,044 sessions, 79.77% seat utilization, 62.74% feature adoption) and positive sentiment from Sarah's team, but this is overshadowed by procurement-level friction. James Park opened the March 10 renewal kick-off call with "before we talk renewal, we need to talk about the last three months," citing Lisa's unaddressed marketing seat concerns, post-expiry billing, and the missed SLA credit. Support INT-1156 documents the customer threatening legal/dispute action on post-expiry invoices. The AM transition from Elena Rodriguez to Tomás Herrera in late December occurred during this escalation window, creating visibility gaps. Meridian's 16 payment reminders and 17 overdue events reflect broader operational friction, though outstanding balance is modest at €3,701.34. Renewal is at risk unless the contract-billing gap is closed immediately, the marketing seat issue is resolved with documented commitment, and the SLA credit is corrected.

Talking points for the renewal

1. Resolve the contract-billing mismatch before the renewal call

Meridian's contract expired in November 2025 but invoicing continued without a renewal agreement in place. James Park's procurement team and legal team are now questioning the post-expiry invoices. Support INT-1156 documents the customer threatening legal/dispute action. Before any renewal discussion, confirm: (1) what contract period is currently in effect, (2) whether a renewal was ever signed, (3) how post-expiry invoices will be handled. This is a legal and procurement issue, not a product issue. Delay here will trigger formal dispute.

2. Address the four-ticket marketing seat escalation with a documented resolution

Lisa has raised the marketing seat utilization issue through support four times (TKT-4871, TKT-4903, TKT-4909, TKT-4920) over 2+ years. Each escalation was routed to the AM with no resolution. Support INT-1154 documents AM non-response for one week, forcing support to escalate to management. The customer is paying for 12 marketing seats but has only 3 active users (42.58% seat utilization vs. 79.77% in Engineering). Bring a specific proposal to the renewal call: either reduce the seat count to match actual usage or explain the commercial rationale for the current allocation. Get written confirmation from James

or Lisa.

3. Correct the missing SLA credit and document the fix

The December 15 outage (4.5 hours) triggered an SLA breach and a €929.18 credit per contract Section 7.2. Elena Rodriguez confirmed in writing on December 16 that the credit would be applied to INV-2026-MH-026. James Park discovered on January 19 that the credit was not applied—the invoice was €18,583.58 instead of the correct €17,654.40. This is a billing accuracy failure that James escalated to his CFO (Margaret). Before the renewal call, confirm the credit has been applied or issue a corrective invoice immediately. Bring proof of correction to the call.
