RENEWAL RISK: RED

Critical contract-billing mismatch, repeated unaddressed support escalations on marketing seats, and AM handoff failures have eroded trust despite strong Engineering usage, creating immediate churn risk ahead of renewal.

Executive narrative

Meridian Health presents a paradoxical renewal risk: Engineering is a healthy, embedded anchor with 27,044 sessions, 19.94 mean active users, and 79.77% seat utilization, with champion Sarah confirming strong adoption. However, this strength is overshadowed by three critical operational failures that James raised directly on the March 10 renewal kick-off call. First, the contract-billing mismatch is unresolved. The contract expired in November 2025, yet invoicing continued without a formal renewal agreement in place. Support ticket INT-1153 (Feb 3) escalated this as a churn risk, noting it was the fourth time the marketing seat issue had been raised (TKT-4903 in August, TKT-4909 in November, TKT-4920 in February). Lisa has been flagging the 12-seat marketing invoice against 3 actual users for over two years. James explicitly stated his legal team is questioning the post-expiry billing arrangement. Second, AM responsiveness collapsed during the December handoff from Elena to Tomás. Support ticket INT-1154 (Feb 10) documents that escalations went unanswered for a week, with the support agent noting "this pattern of AM non-response on this account is documented across four tickets now." Tomás's own Feb 10 CRM note indicates he was unaware of open escalations: "no open support escalations that I can see in my queue." The SLA credit CN-2025-MH-002 (€929.18) was generated Dec 19 but Tomás did not verify its application to the January invoice until after James raised it on the renewal call. Third, 8 SLA breaches across 22 support tickets and a 17-day maximum overdue payment event signal operational strain. While the December outage was handled well (INT-1149 rated 4/5), the broader pattern of 16 payment reminders and 17 overdue events indicates cash-flow friction or billing confusion—likely exacerbated by the contract-billing mismatch. James's opening statement—"before we talk renewal, we need to talk about the last three months"—signals that renewal is now conditional on resolving these operational failures. The AM team's failure to proactively surface and resolve the marketing seat and contract status issues before the renewal conversation began is the primary risk driver.

Talking points for the renewal

1. Resolve the contract-billing mismatch immediately

James's legal team is questioning why invoicing continued post-November 2025 contract expiry without a signed renewal. Before any renewal discussion, confirm: (1) the exact contract end date and current auto-renewal terms, (2) whether the post-expiry invoices (including the €17,654.40 February invoice with SLA credit CN-2025-MH-002) are valid under the existing agreement or require retroactive amendment, (3) a formal renewal agreement signed before the next invoice cycle. This is a legal and trust issue, not a commercial one. Delaying resolution will be read as evasion.

2. Address the marketing seat utilization issue with a concrete proposal

Lisa has raised the marketing seat count four times over two years (TKT-4903, TKT-4909, TKT-4920, and INT-1150). The account is invoiced for 12 seats but only 3 are actively used (42.58% mean seat utilization). The previous AM's renewal plan proposed right-sizing to 8 seats, but this was never communicated to the customer. On the renewal call, propose: (1) immediate adjustment to 8 seats effective next invoice, (2) a credit or invoice adjustment for the over-invoiced period, (3) a clear seat-management process going forward. This removes a two-year source of friction and demonstrates responsiveness.

3. Rebuild AM accountability and escalation visibility

The handoff from Elena to Tomás in December created a blind spot: Tomás was unaware of four open escalations on marketing seats and contract status. Support ticket INT-1154 documents that escalations went unanswered for a week. Before the next renewal conversation, (1) conduct a joint review of all 10 open support tickets with James and Lisa to confirm resolution status, (2) assign a single point of contact (not a queue) for escalations, (3) schedule a monthly business review to surface utilization and billing issues proactively. James's opening statement on the renewal call—'nobody on your side seems to care'—reflects a trust deficit that only consistent follow-through will repair.
